

Protect Your Most Valuable Asset

WITH THE MULTI-LAYERED CANOPYSM MANAGED CLOUD

Data and applications are critical to your business. NPI has a long track record of protecting data and understands the issues associated with Business Continuity and Disaster Recovery. We have designed and implemented a 3-layer private Cloud solution with a focus on optimal protection for your company's data. The redundancy built into this solution includes:

LAYER ONE

Your data and applications are protected in the NPI Private Cloud at a highly secure and redundant co-location facility in the mid-Atlantic region.

LAYER TWO

Using our CanopySM Managed Backup and Recovery Service, an encrypted snapshot is replicated to another Cloud provider in a different region. This backup can be mounted as a virtual server if needed for recovery.

LAYER THREE

Your data is replicated to a third data center in still another region to assure recovery from a regional disaster.

DETAILS

SITE REDUNDANCY: 3 Geographically diverse locations on both coasts and separate power grids

HARDWARE REDUNDANCY: Servers; disk arrays; power suppliers; network Infrastructure

FACILITY REDUNDANCY: Generators; HVAC

BUILDING LOCATIONS: Away from flood zones

SECURITY: SSAE16; HIPAA

ACCESS: Multiple controls including biometric

SUPPORT: 100% US-based

CERTIFICATION: Uptime Institute Tier 3
